

Profiles of long noncoding  
long noncoding RNA

## **Cell culture and cyclic stretch loading**

VSMCs were isolated from the thoracic aortas of male Sprag

---

## Coexpression network and gene function analysis

According to the raw intensity of lncRNA  $\zeta$

The canonical pathways that were identified also included activation of IRF by cytosolic pattern recognition receptors, 5-phosphoribosyl 1-pyrophosphate (PRPP) biosynthesis I and allograft rejection signalling, among others. The molecular and cellular functions analysis revealed the involvement of IRF7, proenkephalin and monoglyceride lipase in ~~cell assembly or cell-to-cell s~~
